Totally Clean are proud to announce new types of cleaning products. They are kind to the environment, Made from concentrate to provide excellent economy without compromising on cleaning power.

## Kind to the Environment

The Totally Clean ecological range has been specifically formulated to be kind to the environment. Its manufacture is powered by photovoltaic solar panels. The ingredients used in the formulations are glucose based materials, low hazard alkalis and food based acids. This allows our products to be fully biodegradable, with no special disposal requirements. The containers we use are HDPE and can be easily recycled.

## Dosing System

The products are provided in a specially designed dosing bottle. A starter pack contains 1 litre of concentrate, 2 colour coded trigger spray heads and 2 labelled trigger spray bottles. This simple system means the ready to use product can be made as needed by anybody with basic CLP/CosHH Training.

## Excellent Economy

The highly concentrated nature of our products means each 1 litre bottle will provide you with up to 40, yes 40x750ml bottles of ready to use product. As this is a concentrate you are not paying us to deliver water to you, essentially cutting your transport costs.

## Low Hazard Formulation

All our concentrates are low hazard, with no handling requirements under the old Coshh system and eye irritation under the new CLP labelling requirement. The Ready to use product is not classified under the CLP regulations meaning it has almost no hazard.

## Benefits of the Range

- Environmentally friendly.
- Simple dosing system.
- Compact for easy storage.
- Powerful cleaning action.
- Cost effective.
- Fully biodegradable.
- Phosphate and phosphonate free.
- For domestic and industrial use.
- Low Hazard at point of use.

**1ltr concentrate will yield up to  
40x750ml ready to use bottles making  
the average cost per 750ml 11p!**
